CYBER EMERGENCY RESPONSE UNIFORM

- RAPID, RELIABLE, READY.**
Built for cyber emergency response teams. Designed to act fast and deliver under pressure.
- PROTECT & RESPOND**
Professional firefighter-inspired uniform that represents protection, strength and readiness.
- HIGH VISIBILITY**
Reflective stripes and bold branding ensure visibility in every environment.
- UNITED AS ONE**
Strong identity that builds unity, trust and mission-driven purpose.
- MISSION DRIVEN**
We respond. We resolve. We protect what matters most.

Pre-Event

Idea 1: Cyber Emergency Dispatch Emailers

Before CYDES begins, TechOwl sends a series of emergency dispatch-style emailers to prospective attendees.

Designed to look like cyber incident alerts, each email highlights a real cybersecurity insight or exposure that organisations often overlook.

The objective is to build curiosity, establish TechOwl as a trusted intelligence partner, and drive visitors to the booth before they even arrive at the event.

MISSION BRIEF

A cyber incident rarely begins with an attack.
It begins with an overlooked signal.

-  An exposed asset.
-  A leaked credential.
-  A missed warning sign.

Meet the TechOwl Cyber Emergency Response Team at CYDES and discover what attackers may already know about your organisation.

8 – 10 JULY 2025
See you in Kuala Lumpur.

Idea 2: Malaysia

Cyber Exposure Index

Ahead of CYDES, TechOwl publishes the Malaysia Cyber Exposure Index, a data-led snapshot of publicly visible cyber exposures across Malaysian and ASEAN organisations.

Covering attack surface trends, exposed assets, leaked credentials, and emerging threats, the report positions TechOwl as a source of cyber intelligence rather than another cybersecurity vendor.

To maximise reach and credibility, the report is distributed through leading Malaysian technology, business, and cybersecurity publications ahead of the event.

Potential placements:

- [Digital News Asia](#)
- [The Malaysian Reserve](#)
- [Business Today Malaysia](#)
- [Tech Wire Asia](#)
- CSO Online APAC
- [CyberSecurity Malaysia](#)

During

Idea 3: Emergency Response Desk

Instead of a standard reception counter, TechOwl creates a Cyber Incident Desk where visitors can report a cybersecurity challenge, concern, or incident.

The team responds with immediate insights, guidance, and recommendations, turning the booth into a response centre rather than a sales desk.

If the idea is approved, we can initiate executing the same.

Idea 4: Could This Have Been Prevented?

A large visual wall featuring anonymised cyber incidents from across industries.

Each incident reveals how attackers gained access, the warning signs that existed beforehand, and the overlooked exposure that enabled the breach.

Visitors can follow the attack path and see how seemingly small gaps often lead to major incidents.

COULD THIS HAVE BEEN PREVENTED?

Every breach leaves clues.
Most were visible long
before the incident.

SEE WHAT ATTACKERS SEE.
BEFORE THEY TAKE ADVANTAGE.

THE BREACH BOARD

ANONYMISED REAL-WORLD INCIDENTS. REAL LESSONS.

CASE FILE #01

If the idea is approved, we can initiate executing the same.

Idea 6: The Tissue Paper Idea

Place branded napkins and table cards across lunch tables featuring provocative cybersecurity questions and truths.

Designed to be read while waiting for food, they encourage CISOs and IT leaders to discuss common cyber blind spots, naturally introducing TechOwl into the conversation.

**One mistake

Idea 7: TV Video Threat Map

A live visualisation displayed on a large screen showing the public exposures, attack surfaces, leaked credentials, and vulnerable assets that attackers actively look for.

Instead of visualising attacks, the screen visualises the clues that exist before attacks happen, reinforcing TechOwl's belief that most incidents begin with something already visible.

Idea 8: Water Bottle Label idea

Instead of distributing standard branded water bottles, TechOwl transforms them into Cyber Emergency Hydration Kits.

Each bottle carries a thought-provoking cybersecurity message designed to spark curiosity and conversation among CYDES attendees.

The front label uses relatable situations like thirst and hydration to draw parallels with cyber exposures that often go unnoticed, while the side and back panels introduce TechOwl Shield and encourage visitors to learn more about their organisation's attack surface.

ABOUT TECHOWL SHIELD

TechOwl Shield is an External Attack Surface Management platform that continuously discovers, monitors and analyzes your internet-facing assets to identify exposures attackers can see and exploit.

WHAT WE HELP YOU DO

-  Discover unknown assets and exposures
-  Identify critical risks before attackers do
-  Monitor external threats in real-time
-  Prioritize what matters most

Idea 8: Teh Tarik with TechOwl

TechOwl brings a local Malaysian touch to CYDES by hosting a Teh Tarik Corner at the booth.

Attendees are invited for a relaxed 10-minute Teh Tarik conversation with the TechOwl team, creating a comfortable environment for meaningful discussions around cyber exposure, threat visibility, and security challenges.

By embracing a beloved Malaysian tradition, TechOwl builds familiarity, trust, and stronger connections with delegates beyond the typical exhibition interaction.

1/3rd of one side of the wall space can be kept for conversations.

Idea 9: The Wau Bulan Watch

Insight:

In Malaysia, a Wau Bulan stays in the sky only through constant attention. The moment that attention stops, it falls. Cybersecurity works the same way.

Idea:

TechOwl reimagines Malaysia's iconic Wau Bulan as a booth centrepiece. Designed in TechOwl Shield colours with subtle owl-inspired detailing, the installation becomes a visual representation of continuous vigilance.

Just as a wau stays in the sky only when someone is constantly watching and adjusting for the wind, organisations stay secure only when someone never stops monitoring what matters.

A wau stays in the sky
only if someone never
stops watching it.

That's TechOwl's job
for your network.

Idea 10: The Batik Briefing

Insight

Batik is more than a traditional craft in Malaysia. It remains a visible part of professional and government culture, symbolising heritage, identity, and pride.

The Idea

For **every booked meeting** at CYDES, TechOwl presents attendees with a small batik-inspired keepsake such as a card holder, lanyard, or desk accessory.

Accompanied by a short note acknowledging Malaysian craftsmanship, the gesture becomes a thoughtful conversation starter and a memorable reminder of the meeting long after the event ends.

Idea 11: Leave Your Card, Take a Verdict

Instead of collecting business cards passively, TechOwl offers every visitor a quick public exposure assessment.

Attendees drop their business card into the collection box, and the TechOwl team runs a rapid exposure review using publicly available intelligence.

By the end of the day, participants receive a short personalised verdict highlighting what attackers may already be able to see about their organisation.

Idea 12: The Translated Truth

At a global cybersecurity event filled with English-only messaging, TechOwl dedicates a section of its booth to a cybersecurity insight written in both English and Bahasa Malaysia.

The objective is not translation, but recognition.

A small gesture that signals TechOwl came to Malaysia prepared to speak to Malaysian audiences, not just Southeast Asia as a market.

The line to translate (English):

"The average company doesn't know it's been breached for 280 days. By the time you read this, the clock may already be running on yours."

Bahasa Malaysia:

"Purata sebuah syarikat tidak menyedari ia telah digodam selama 280 hari. Pada masa anda membaca ini, jam mungkin sudah berjalan untuk syarikat anda."
