The Breach Show

A puppet show uses humour and storytelling to reveal the hidden cost of cyber attacks on businesses.

We are in touch with the puppet show vendor in dubai for costing.

Idea 1: Cyber Crime Scene

Throughout GISEC, small "Cyber Crime Scenes" can be set up in high-footfall areas using caution cones, crime scene tape, and evidence markers

Each scene represents a real-world cybersecurity incident inspired by common mistakes: **weak passwords, phishing, exposed credentials, shadow IT, unsecured vendors, misconfigured cloud assets, and more.**

Instead of simply describing the breach, every installation tells the story of what happened, why it happened, and what could have prevented it.

A TechOwl investigator stationed nearby can engage visitors, explain the case, and direct them to the booth to learn how TechOwl helps organisations detect these warning signs before they become incidents.

NOTE: Will need confirmation on space from the event organisers along with a person. Vinyl printed banner & standee along with cones and printed tape (Can be printed by the organisers)

Idea 2: The Secure Spot

By the end of the day, every GISEC attendee is looking for one thing:

A place to sit.

We can solve that problem by placing branded benches at key locations across the venue.

While visitors take a break, they discover simple, thought-provoking messages about cybersecurity, reinforcing TechOwl's promise of continuous protection.

Because while they rest, TechOwl keeps watch.

NOTE: Will need confirmation on space from the event organisers. Vinyl printed banners (Can be printed by the organisers)

Idea 3: MISSING POSTERS

Throughout GISEC, we'll place "Missing" posters on notice boards, pillars, cafés, seating areas, and other high-traffic locations across the venue.

At first glance, each poster appears to be a genuine missing notice. As visitors begin reading, they realise the missing subject isn't a person: **it's sensitive business data, customer records, credentials, or intellectual property.**

Each poster ends with a tear-off strip that attendees can take back to the TechOwl booth in exchange for a **complimentary Dark Web Exposure Assessment, creating both curiosity and a measurable reason to visit.**

NOTE: Will need confirmation on space from the event organisers. Printed papers with perforation strips (Can be arranged by us from india itself.

Idea 4: The Lift Scan

For many GISEC attendees, the elevator is one of the very first touchpoints of the event. It's a moment where people naturally pause, look ahead, and wait.

We can transform this waiting time into an asset for our brand.

The elevator doors are designed to resemble a live security scan. While visitors wait, the doors display a sequence of messages, creating the illusion that their organisation is being searched across the internet and the dark web.

NOTE: Will need confirmation on space from the event organisers. Vinyl printed banners (Can be printed by the organisers)

Idea 5: The Relaxation Station

Trade shows like GISEC involve long hours of walking, standing, and back-to-back meetings. By midday, attendees are actively looking for a place to sit, recharge, and take a short break.

We can setup a Relaxation Station at its booth with premium foot massage chairs, inviting attendees to take a well-deserved break from the exhibition.

To enjoy a **complimentary massage session**, visitors simply scan a QR code and register for a **FREE Dark Web Assessment of their organisation**.

While attendees unwind, the TechOwl team engages them in a relaxed, informal conversation about their cybersecurity challenges, creating a far more natural interaction than a traditional sales pitch.

NOTE: Will have to lookout for a rented massage chair there in the event can ask organisers if they have any contacts.

Idea 6: The evolution of shields

At cybersecurity events, every booth is filled with **technical specifications, dashboards, and product demonstrations**. A familiar pop culture reference instantly cuts through the clutter, making people stop, smile, and engage.

We propose that a wall at the booth showcases the evolution of Captain America's shield through the different films, highlighting how it has changed and evolved over time.

At the end of the timeline, visitors discover one final reveal:

TechOwl Shield

The Final Boss of Shields.

3d embossed printed

Idea 7: Mobile Charging Stations

A dead phone is one of the biggest inconveniences at any exhibition. Between networking, scanning QR codes, taking notes, and navigating the venue, attendees are constantly looking for a place to recharge.

We can install **FREE Mobile Charging Stations at several locations** across the exhibition, giving attendees a convenient place to recharge their devices while taking a short break.

NOTE: Will need confirmation on space from the event organisers along with the costing.

Idea 8: The Free Wi-Fi Trap

Free public Wi-Fi is one of the most commonly used conveniences at large exhibitions. It's also one of the easiest ways attackers trick people into exposing their data through rogue or spoofed networks.

TechOwl sets up a **FREE GISEC Wi-Fi network** at designated activation zones throughout the venue.

When attendees connect, instead of receiving internet access, they are redirected to a landing page that reveals the lesson:

YOU COULD HAVE BEEN HACKED.

This wasn't a real attack.

But connecting to unknown public Wi-Fi networks without verifying their authenticity is exactly how attackers steal credentials, intercept data, and compromise devices.

Fortunately, this was just a demonstration.

NOTE: Need to carry a router from india and buy a sim card from dubai and a web page to be coded for log in, Vinyl printed banners (Can be printed by the organisers)

Idea 9: Malware Hunters

A Malware Hunters game is installed at a high-footfall location outside the TechOwl booth to attract and engage attendees.

Players are challenged to hit illuminated targets as quickly as possible, representing malware, threats, and suspicious activity appearing across a network. As the game progresses, the targets appear faster and in multiple locations simultaneously, making it nearly impossible to keep up.

At the end of every game, the screen displays the message:

You can't catch every threat.

We can.

NOTE: Will need confirmation on space from the event organisers. We are in touch with the vendor from this website.

Idea 10: Accept Cookies Wisely

A brand ambassador dressed as a giant cookie walks around the venue handing out FREE cookies to attendees.

Each cookie is wrapped in custom packaging carrying a simple cybersecurity reminder:

Accept cookies only from trusted sources.

Stay Owlert.

The activation uses humour and a familiar internet term to create an instant connection, making it a fun, memorable conversation starter while subtly reinforcing safe online behaviour.

Visitors are then invited to continue the conversation at TechOwl | Booth 110.

NOTE: Need a person who can wear this outfit, can get this cookie uniform customised.

Idea 11: You've Been Tagged

Brand ambassadors discreetly place a removable Post-it note on attendees' backs as they walk through the exhibition—just like the classic "Kick Me" prank from school.

Most people continue walking, networking, and attending sessions completely unaware that something has been attached to them.

Eventually, a colleague points it out—or they discover it themselves.

The note reads:

YOU'VE BEEN BREACHED.

Luckily,

this was just a Post-it.

NOTE: the volunteers of Techowl will do it.

Idea 12: Lost & Found

Dubai is known as one of the safest cities in the world. It's often said that if you lose your wallet here, there's a good chance it will find its way back to you.

We'll place different types of wallets, purses, and card holders in common areas around the venue, such as washrooms, seating areas, cafés, and parking zones. Naturally curious, attendees will pick them up and open them in an attempt to identify the owner.

Instead of cash or identification, they'll discover a message that draws a powerful comparison between physical security and cybersecurity.

Message Inside

Habibi, Welcome to Dubai

A Lost wallet can find its way back.

Lost data rarely does.

**Ideas to be
implemented from
CYDES**

Uniform Theme

Rose Tea with TechOwl

TechOwl brings a local Malaysian touch to CYDES by hosting a rose tea corner at the booth.

Attendees are invited for a relaxed 10-minute gulaabo conversation with the TechOwl team, creating a comfortable environment for meaningful discussions around cyber exposure, threat visibility, and security challenges.

By embracing a beloved middle eastern tradition, TechOwl builds familiarity, trust, and stronger connections with delegates beyond the typical exhibition interaction.

Leave Your Card, Take a Verdict

Instead of collecting business cards passively, TechOwl offers every visitor a quick public exposure assessment.

Attendees drop their business card into the collection box, and the TechOwl team runs a rapid exposure review using publicly available intelligence.

By the end of the day, participants receive a short personalised verdict highlighting what attackers may already be able to see about their organisation.

Water Bottle Label idea

Instead of distributing standard branded water bottles, TechOwl transforms them into Cyber Emergency Hydration Kits.

Each bottle carries a thought-provoking cybersecurity message designed to spark curiosity and conversation among CYDES attendees.

The front label uses relatable situations like thirst and hydration to draw parallels with cyber exposures that often go unnoticed, while the side and back panels introduce TechOwl Shield and encourage visitors to learn more about their organisation's attack surface.

The Tissue Paper Idea

Place branded napkins and table cards across lunch tables featuring provocative cybersecurity questions and truths.

Designed to be read while waiting for food, they encourage CISOs and IT leaders to discuss common cyber blind spots, naturally introducing TechOwl into the conversation.
