AGENDA #1

SOCiAL MEDiA

OUR vision

To make Techowl Internet's
Most Memorable Cybersecurity Brand!

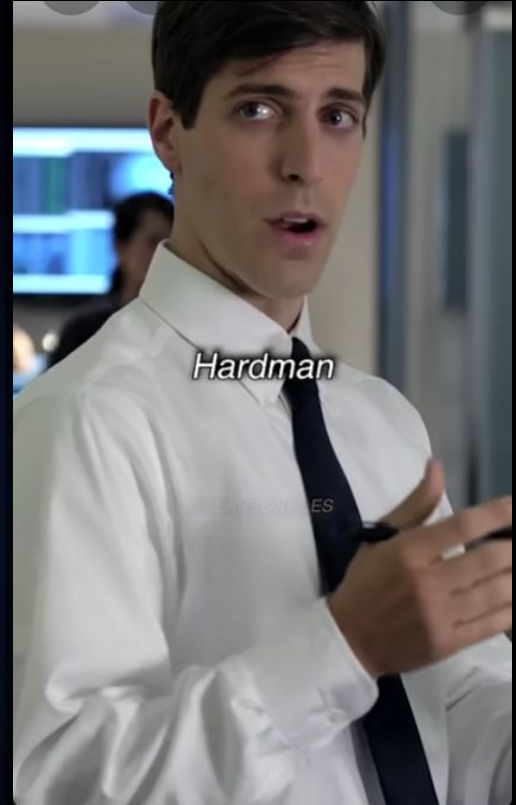

Right now, most cybersecurity brands talk like:
compliance reports | dashboards | technical superiority

But people *don't* remember the most technically correct brands. They remember the brands that made them **feel something**.

Fevicol didn't sell adhesive. It sold mazbooti.

The goal is: 'if something goes wrong digitally, TechOwl should be the first name people think of.'

THE PERSONA WE AIM TO CREATE

SOCiAL MEDIA CONTENT BUCKETS

JAGGTE RAHO

Why: Most cyber attacks succeed because of simple human mistakes and lack of awareness.

What: A content series focused on practical cybersecurity tips for both organizations and individuals.

How: Simple, relatable, and easy-to-share content covering topics such as phishing, password hygiene, public Wi-Fi risks, social engineering, AI usage, and online safety.

CREATiVES

KUCH TOH GADBAD HAI.

Why: Many cyber incidents start with everyday employee behaviors that seem harmless but create security gaps within an organization.

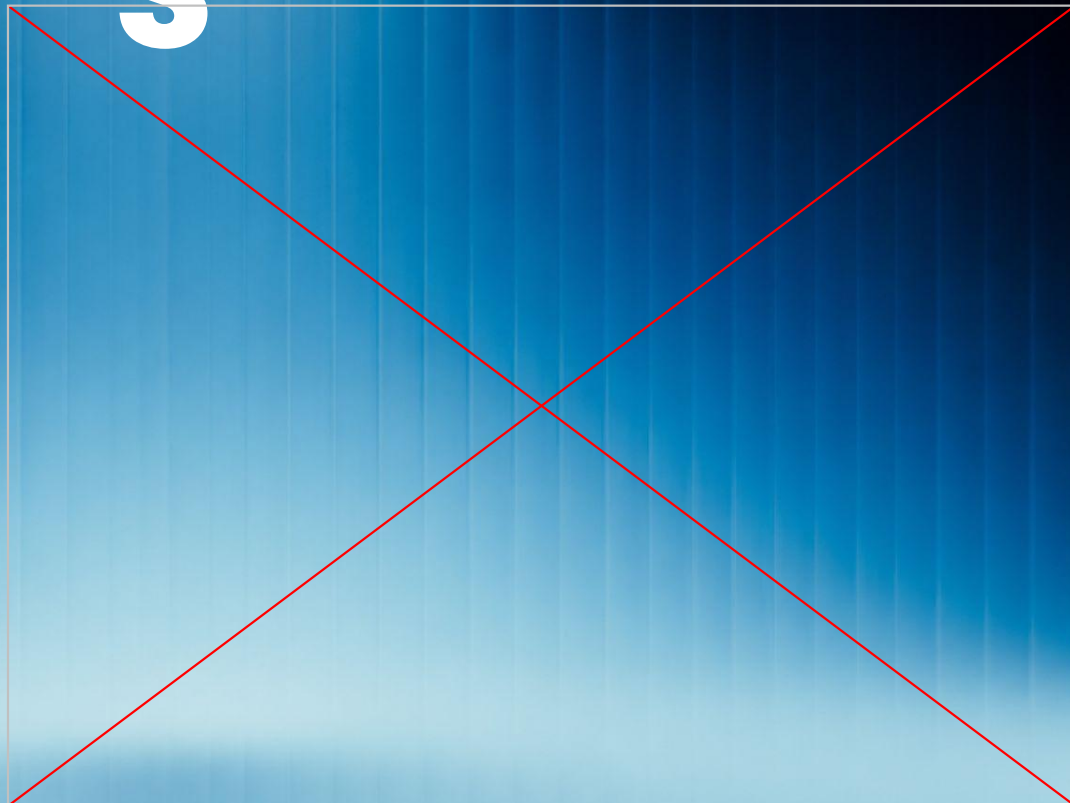

What: A content series highlighting risky workplace habits, poor cyber hygiene, and common mistakes that can expose organizations to threats.

How: Using familiar Indian cultural references and everyday workplace situations to point out warning signs. The content encourages audiences to pause, question, and identify when "something isn't right."

CREATIVES

CREATIVE S

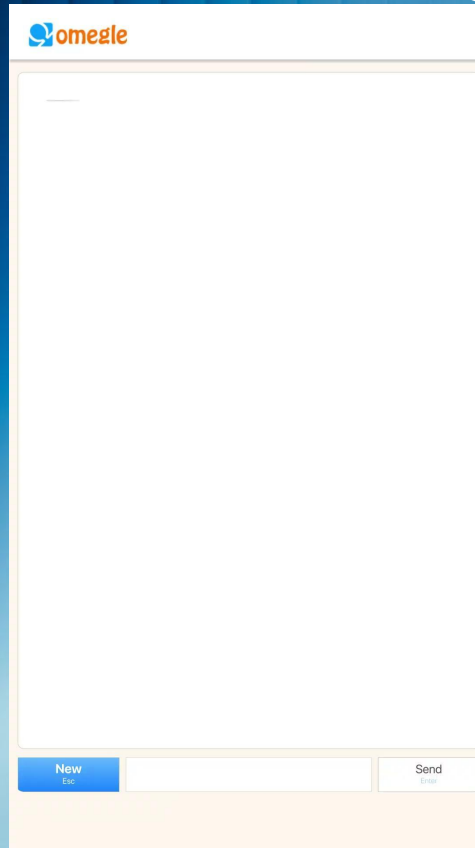

THEY ARE ALREADY INSIDE

Why: Hackers don't always attack immediately. On average, they spend weeks or even months inside systems before being detected, silently gathering information and identifying vulnerabilities.

What: An awareness-driven content bucket built around the importance of cybersecurity audits.

How: The content creates urgency and positions cybersecurity audits as a critical first step toward identifying hidden risks.

CREATIVE S

LiNKEDiN

iNSiGHT

People trust people more than they
trust brands.

When a company talks about how great it is, it can feel like marketing. But when employees share their experiences, achievements, and perspectives, it creates credibility, authenticity, and trust.

The primary focus for LinkedIn will be on creating content for employees to post and engage with on LinkedIn. This includes personal achievements, event participation, industry insights, company culture, certifications, project milestones, and thought leadership.

The TechOwl company page will act as the official voice for major updates such as exhibitions, partnerships, awards, press coverage, product launches, and company announcements.

This approach allows TechOwl to build trust through people first, and the brand second.

Kuch Toh Gadbad Hai: 5 Everyday Habits That Are Putting Your Company at Risk

Small mistakes. Big consequences. Here are 5 common security slip-ups your team might be making (without even realising it).

By Team TechOwl
May 16, 2025 • 6 min read

In today's digital world, cyber threats don't always come from sophisticated hackers. Sometimes, the biggest risks come from everyday habits we don't think twice about.

Here are 5 common security mistakes that could be putting your company data, reputation and finances at risk.

1 Using "Password@123" for Everything

Simple, easy-to-guess passwords are the first thing attackers try. Using the same password across multiple accounts? Even worse.

 **TechOwl Tip:** Use strong, unique passwords and a password manager. Your future self will thank you.

2 Uploading Confidential PDFs on AI Tools

AI tools are powerful, but uploading sensitive documents to public platforms can lead to serious data leaks. Convenience shouldn't come at the cost of confidentiality.

 **TechOwl Tip:** Always review data handling policies. When in doubt, don't upload.

3 Giving Ex-employees Access Because "Kabhi Kaam Aa Sakta Hai"

Old access = potential backdoor. Ex-employees with active logins can be a silent threat to your systems.

 **TechOwl Tip:** Implement a strict access review policy. Remove. Revoke. Review.

About TechOwl

TechOwl is a CERT-in empanelled cybersecurity company and Fortinet Engage Preferred Services Partner, helping businesses stay secure, resilient and future-ready.

India's Cybersecurity Regulations Need Stronger Enforcement, Says TechOwl Founder

Industry leaders call for clearer compliance frameworks as cyberattacks continue to rise.

By ET Now Digital | Updated: May 30, 2025, 11:45 AM IST

Ravi Raval, Founder & Director, TechOwl Infosec, speaking on ET Now

New Delhi: As India accelerates its digital transformation, cybersecurity experts are raising concerns over the lack of robust regulations and weak enforcement mechanisms.

Ravi Raval, Founder and Director of TechOwl Infosec, a CERT-In empanelled cybersecurity company, said that while India has made progress in developing policies,

AGENDA #4

COLLABORATIONS

As an extension of the "Kuch Toh Gadbad Hai" content bucket, we propose a collaboration with [ACP Pradyuman from CID for an ad film.](#)

Beyond the nostalgia factor, ACP Pradyuman brings with him a strong fan following and immediate recall value, helping [the campaign capture attention far beyond the cybersecurity industry.](#)

What makes this collaboration especially powerful is its uniqueness. While cybersecurity communication is often technical, serious, and predictable, [no brand in the category has leveraged a cultural icon](#) in such an unexpected and entertaining manner.

AD FiLM

CID headquarters suffers a cyber attack – the case files are leaking, evidence folders are disappearing, computers are flashing ransom messages.

The teams are trying random solutions, then ACP Pradyuman enters and yells:

"Yeh kaam kisi aam hacker ka nahi hai"

He then makes a call:

"Ravi... kuch toh gadbad hai."

Cut to TechOwl team taking over.

The film becomes a showcase of: Unlimited Takedowns, 24x7 SOC, Threat Monitoring, Incident Response or any other USP.

With ACP Pradyuman with the end slate: Chen se sona hai toh TechOwl ko jagao!

SOCiAL MEDIA REEL

CONCEPT

ACP is retired & Living peacefully.

Suddenly his phone rings.

A businessman says: "Sir, company hack
ho gayi."

ACP replies: "Ab yeh crime scene mera
nahi hai."

"Yeh TechOwl walon ka hai."

Cut to TechOwl SOC.

AGENDA #5

SURPRiSE

Inspired by the iconic fire drill scene from *The Office*, the film opens in the middle of a cyberattack.

An IT office descends into complete chaos. People panic. Someone is unplugging random cables. Someone is smashing a CPU. Someone is calling the FBI. Another employee is Googling "How to stop a hacker." Everyone is reacting, but nobody knows what to do.

All this is been observed by a guy from another office through his window, who calls his cybersecurity partner and asks:

"Apna toh sab theek chal raha hai na?"

"Bilkul."

He puts his phone down, switches off the light, and goes to sleep.
